Output relay: 16A / 3600W

Temperature range: 0 / +40°C

Housing: IP21

Mounting: Flush

OJ ELECTRONICS

Week Year

MCD3 – ECO Design

This change is performed to be able to obtain ECO Design compliance while the thermostat is turned off (The on/off switch is pressed down).

As the product still uses a small amount of power to keep the clock running it is mandatory to show something on the display.

Affected products

All MCD3 variants

Impact on affected products

Before the change nothing was shown on the display when the thermostat was turned off.

When the thermostat is turned off the clock will now be shown on the display.

If the clock has not yet been set or has been reset (e.g. after a longer power cycle), 00:00 is shown.

Time and Availability

The change was introduced on May 13th, 2025

How to distinguish between the thermostats when looking at the box label.

From Week 21 2025 the clock is shown in the display while the thermostat is turned off.
